

Floating Microballoons : A study on gastroention drug delivery system

By Upadhyay, Prashant

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Novel Gastroretentive dosage forms are based on novel approach of low density dosage forms using polymers that remain buoyant above gastric fluid having specific gravity of less than 1.004 g/ml. The Floating Microballoons or Floating Microspheres or Floating Multiparticulates drug delivery systems used as biological macromolecules are prepared using the methodology of emulsion solvent evaporation technique. They are Characterized for micromeritic properties i.e. particle size, tapped density, compressibility index, true density, and flow property. Studies of percentage yield, drug entrapment, buoyancy, in vitro dissolution. The optimization of batch was fitted to Hugguchi and Koresmeyer peppas model. Morphological study by Scanning Electron Microscopy, Drug carrier interaction by FTIR and drug crystalline nature by XRD patterns. Analysis of optimized batch was done using HPLC, GC, Mass and NMR spectra. Accelerated stability studies was done to know its shelf life. Capsule Formulation was designed to give perfection to the formulations including its evaluations so to scale up for Industrial Level to achieve its production in future. | Format: Paperback | Language/Sprache: english | 120 pp.

Reviews

The book is great and fantastic. it had been writtern extremely perfectly and valuable. I am very happy to let you know that here is the finest pdf i have read through within my own life and can be he very best book for actually.

-- **Miss Rossie Fay**

Thorough guideline for publication fanatics. Better then never, though i am quite late in start reading this one. I am just effortlessly could possibly get a delight of reading a created book.

-- **Terry Bailey**
