

Parameter Analysis of Lunar Surface Navigation Utilizing Dilution-Of-Precision Methodology with Lunar Orbiters

Filesize: 6.61 MB

Reviews

This book is very gripping and fascinating. Of course, it can be perform, nevertheless an amazing and interesting literature. I am just pleased to explain how this is basically the finest publication i have go through within my very own lifestyle and might be he best pdf for possibly.

(Prof. Beulah Stark)

PARAMETER ANALYSIS OF LUNAR SURFACE NAVIGATION UTILIZING DILUTION-OF-PRECISION METHODOLOGY WITH LUNAR ORBITERS

To download **Parameter Analysis of Lunar Surface Navigation Utilizing Dilution-Of-Precision Methodology with Lunar Orbiters** PDF, remember to follow the hyperlink below and download the document or have accessibility to other information which might be have conjunction with **PARAMETER ANALYSIS OF LUNAR SURFACE NAVIGATION UTILIZING DILUTION-OF-PRECISION METHODOLOGY WITH LUNAR ORBITERS** book.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. With the NASA Vision for Space Exploration focusing on the return of astronauts to the Moon and eventually to Mars, architectures for new navigation concepts must be derived and analyzed. One such concept, developed by the Space Communications Architecture Working Group (SCAWG), is to place a constellation of satellites around the Moon. Previously completed analyses examined the performance of multiple satellite constellations and recommended a constellation oriented as a Walker polar 621 with a semimajor axis (SMA) of 9250 km. One requirement of the constellations that were examined was that they have continuous access to any location on the lunar surface. In this report, the polar 621 and polar 821, with equal SMAs, are examined in greater detail. The dilution-of-precision (DoP) methodology is utilized to examine the effects of longitude surface points, latitude surface points, elevation requirements, and modified failure modes for these two constellations with regard to system availability. Longitude study results show that points along a meridian closely approximate the results of a global set of data points. Latitude study results show that previous assumptions with regard to latitude spacing are adequate to simulate global system availability. Elevation study results show that global system availability curves follow a reverse sigmoid function. Modified failure mode study results show that the benefits of reorienting a failure mode constellation depend on the type of navigation system and the length of the integration period being used. This item ships from La Vergne, TN. Paperback.
