Oxford University Press Inc, United States, 2002. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.In *The Changing Brain*, Ira Black tells the fascinating story of modern neuroscience. A rich, multifaceted tale spanning a century and taking place on multiple continents, it moves from Fascist Italy, with the discovery of nerve growth factor (NGF) by a young scientist working secretly in a makeshift laboratory in her bedroom, to current experiments in which transplanted, laboratory-grown cells lead to recovery and function in damaged brain regions. In the mid 1990s, a revolutionary new concept of the brain emerged, instead of the traditional view that the brain s role in perception, memory, learning, and emotions was based on a static, non-renewable network of brain cells and connections, research revealed that the human brain is an ever-changing, fantastically complex system that is continually being shaped and reshaped by a subtle interplay of genetic clues and life experiences. To bridge the gap between abstract concepts and real-world experience, the author draws upon his expertise as a clinical neurologist to provide a dramatic account of the fictionalized story of a successful investment banker named Enoch Wallace and his battle with Alzheimer s disease, that vividly illuminates the narrative. From his first fleeting memory lapses to his final descent into dementia, each step in Wallace s decline becomes a window into another aspect of brain function and the latest groundbreaking research in neuroscience.
