Treatment of Overactive Bladder in Women: Main Report (see also Treatment of Overactive Bladder in Women: Appendices) - At minimum, 11 to 16 million women in the U. S. cope on a daily basis with symptoms that include sudden strong urges to urinate, difficulty delaying voids, frequent trips to the bathroom, and in many cases involuntary loss of urine when urgency strikes. They may wear pads for accidents, plan ahead for access to bathrooms, and modify their social and work lives to accommodate their symptoms. Some are very distressed by the symptoms whether mild or severe, and others find mechanisms to adapt, reporting little trouble with symptoms or interference with normal routines. Others report their symptoms negatively influence quality of life factors as varied as self-esteem, self-assessment of attractiveness, and sexual function. Many women believe that some amount of urinary incontinence is inevitable with aging. The majority of women with these symptoms do not talk with their health care providers concerning their bladder dysfunction, and providers may not systematically inquire. As a result, a small minority receive treatment. Overactive bladder syndrome,...
