Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Clarification of Sewage In Germany, presumably because of local conditions, devices and processes for the clarification of sewage have been much more highly developed than in this country. Many of the rivers are large and the modification of the sewage to a non-putrescible state is quite frequently unnecessary. On this account there are many plants in Germany where screening devices and tanks of various kinds constitute the entire equipment of a sewage treatment plant. The author of this book, Dr. Ing. Rudolf Schmeitzner, visited a number of the larger German clarification plants, prepared a detailed account of his trip and has presented, from an engineering standpoint, a critical review of the essential processes and devices now used in Germany in the preparatory treatment of sewage. The literature in English relating to the design of screens of various types of sedimentation tanks, of towers and methods of sludge removal and disposal is apparently meagre, and it occurred to the translator that a translation of Schmeitzner s book might be of marked interest and profit to American engineers. This would appear especially to be true since many of our large water courses are fast becoming too polluted longer to serve for the inoffensive disposal of sewage.
