

A Novel Application of Internet of Things

By Annabattula, Jawahar

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The internet of things (IoT) is the network of physical objects-devices, vehicles, buildings and other items-embedded with electronics, software, sensors, and network connectivity that enables these objects to collect and exchange data. The IoT allows objects to be sensed and controlled remotely across existing network infrastructure, creating opportunities for more direct integration of the physical world into computer-based systems, and resulting in improved efficiency, accuracy and economic benefit; when IoT is augmented with sensors and actuators, the technology becomes an instance of the more general class of cyber-physical systems, which also encompasses technologies such as smart grids, smart homes, intelligent transportation and smart cities. Each thing is uniquely identifiable through its embedded computing system but is able to interoperate within the existing Internet infrastructure. | Format: Paperback | Language/Sprache: english | 84 pp.

Reviews

This publication is indeed gripping and intriguing. It is actually written in basic terms and not difficult to understand. I am just pleased to explain how here is the greatest publication we have read through during my own lifestyle and could be the best pdf for at any time.

-- Ervin Crona

The best publication I ever study. It is really basic but unexpected situations within the fifty percent of your publication. Your lifestyle period is going to be enhanced as soon as you total reading this article publication.

-- Ashton Kassulke
