Excerpt from Computation of the Equilibrium of a Plasma With Helical Symmetry Magnetohydrodynamics is one of the models used in plasma physics for describing the behavior of an ionized gas, or plasma, contained by a magnetic field. It is quite useful, since it combines reasonable physical accuracy With mathematical Simplicity. In the magnetohydrodynamic approach, the plasma is considered to be a classical macroscopic conducting fluid, characterized by its density ρ , its entropy S and its flow velocity u . The pressure p is then a function of ρ and S . The magnetic field B and the current J which interact with this plasma exert a Lorentz force $j \times B$.
