Brand New Book ***** Print on Demand *****.Excerpt from Use of Electrical Geophysical Methods in Groundwater Supply Both industrial and public water supplies benefit by technological procedures that aid in economically developing and maintaining adequate volumes of water of a sanitary quality. To so aid the waterworks of Illinois, the Illinois State Geological Survey has for many years carried on research and rendered service to the municipalities and industries of the State on the geological and geophysical aspects of groundwater supply. Other state agencies also render water supply services, the State Water Survey doing work on surface water supplies, stream-gaging in cooperation with the U. S. Geological Survey, pumpage of groundwater, and the chemistry of water, and the Department of Public Health handling all health and sanitation aspects. The work of these agencies is coordinated so that all inquiries are referred to the proper office for the assistance needed, with the result that in most cases joint reports are prepared by two of the agencies, and often the opinions of all three are applied to particular problems.
