Brand New Book ***** Print on Demand *****.Excerpt from A Laboratory Manual of Physiological Chemistry In a subject where rapid advancement is being made no explanation for the issue of a new edition of a textbook is necessary. Not only is the field of physiological chemistry steadily enlarging through intensive research, but the subject is being more widely studied than ever before. Although a few years ago physiological chemistry was almost entirely confined to medical curricula, it is now included not only in such courses as dentistry and pharmacy, but in those of normal, scientific and industrial colleges and of schools of home economics and domestic science. There will be differences of opinion as to what material should be included in any text and what should be dispensed with. Because of the belief that for a first course too complete a guide is usually an embarrassment to the student, no attempt has been made to make this book all-inclusive or encyclopedic. Most of the methods used in modern clinical chemistry are given, or at least the typical ones. Those which are chiefly employed in research alone are, for the most part, omitted, since the advanced student should go to the literature for them. More work has been outlined than can be completed in the usual medical curriculum. This has been done partly to allow the instructor some choice in methods, partly to let the exceptional student, who is found in every large class, gratify his desire to advance beyond the average limit.
