Reference has been made (pp. 16, 29) to the Market Gardens in the Thames Valley to the west and south of London, situated on a loamy subsoil or on a loamy soil overlying sand and gravel. Reference has also been made to the thin Chalk soils (p. 37). Porous soils as a rule are moister in hot weather than clays, and Chalk, as is well known, may contain sufficient moisture to keep a lawn verdant when the grass suffers on other subsoils. Poplars absorb much moisture from the ground. With regard to Nursery Grounds a large area which will provide a diversity of subsoil is of course desirable, and it is needful also in selecting suitable sites both for Nursery Grounds and Orchards, to consider the aspect, and the shelter that may be afforded from northerly and easterly winds by higher grounds or belts of...
