EPIGENETIC MECHANISMS IN HUMAN CANCER

Luis G. Acevedo
Epigenetic mechanisms in human cancer
Analysis of the epigenetic mechanisms underlying gene expression changes in liver cancer

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Analysis of the epigenetic mechanisms underlying gene expression changes in liver cancer | Epigenetics is the field that studies the changes that regulate gene expression without affecting the coding sequence of DNA, such as changes in DNA methylation and posttranslational modifications at the histone tails. Using chromatin immunoprecipitation (ChIP) scientists are able to study which proteins (histones or transcription factors) bind to DNA at a specific locus. ChIP becomes a powerful tool...
