Dealing with permafrost related mountain hazards requires knowledge on the exact permafrost distribution throughout mountain areas. Therefore, a monitoring project on European permafrost distribution will be discussed. Furthermore, it has to be determined, what mountain hazards exist in general and which of them could be affected by permafrost degradation in terms of frequency and/or intensity. Two different types of mountain hazards will be examined in detail: rockfall and outburst flood of permafrost dammed lakes. Moreover, the impact of mountain hazards on the society will be marked. The focus will be on investigations which can be done, before undertaking engineering projects. After that a brief overview on perspectives in terms of climate scenarios and their possible impact on permafrost degradation and mountain hazards will be given. Finally, some concluding statements will be made. 20 pp. Englisch.
