

Evolutionary Conservation: Protecting Our World

By MR Julian Ashbourn

Createspace, United States, 2014. Paperback. Book Condition: New. 244 x 170 mm. Language: English . Brand New Book ***** Print on Demand *****.The Evolutionary Conservation concept introduces a new way of practising collaborative conservation on an unprecedented scale, ensuring that the complex web of interactions and dependencies between natural habitats, species and overall environments are properly understood. Furthermore, for the first time, this model introduces an evolutionary element which holds the potential to enhance our ongoing understanding significantly. The model revolves around an intuitive set of tools and an operational hierarchy in support of the broader concept. It is scalable, from local initiative, through regional collaboration, to national, international and, ultimately global. The premise for Evolutionary Conservation lies in looking at conservation from a different perspective. The popular conservationist idea of preserving an environment as we would like it to be, is somewhat at odds with natural evolution and the dynamic balancing act that nature plays in order to maintain a sustainable world. The descent with modification mechanism described by Darwin is an example of natural adaptability according to prevailing conditions. A habitat locked in time would not be able to develop or react to the ever changing situation on...
