EFFICIENT NUMERICAL METHODS AND INFORMATION-PROCESSING TECHNIQUES FOR MODELING HYDRO- AND ENVIRONMENTAL SYSTEMS LECTURE NOTES IN APPLIED AND COMPUTATIONAL MECHANICS

Springer. Paperback. Condition: New. 306 pages. Dimensions: 9.2in. x 6.1in. x 0.8in. Numerical simulation models have become indispensable in hydro- and environmental sciences and engineering. This monograph presents a general introduction to numerical simulation in environment water, based on the solution of the equations for groundwater flow and transport processes, for multiphase and multicomponent flow and transport processes in the subsurface as well as for flow and transport processes in surface waters. It displays in detail the state of the art...

Great electronic book and useful one. It can be writter in straightforward terms rather than difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.
