An Introduction to Identification

By J. P. Norton

Dover Publications. Paperback. Book Condition: New. Paperback. 320 pages. Dimensions: 8.3in. x 5.3in. x 0.7in. Advanced undergraduates and graduate students of electrical, chemical, mechanical, and environmental engineering will appreciate this text for a course in systems identification. In addition to the theoretical basis for mathematical modeling, it covers a variety of tried-and-true identification algorithms and their applications. Moreover, its broad view and fairly modest mathematical level offer readers a quick appraisal of established methods and their limitations. In addition to surveys covering classical methods of identification including impulse, step, and sine-wave testing and identification based on correlation function, the text examines least-squares model fitting, statistical properties of estimators, optimal estimation, and Bayes and maximum-likelihood estimators. Other topics include experiment design and choice of model structure as well as model validation. Numerical examples show students how to apply the modeling theories, and a chapter on specialized topics introduces research areas. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.

Reviews

This publication is wonderful. I could comprehend every thing out of this published e publication. You can expect to like the way the blogger write this publication.

-- **Eliseo Rippin**

This written book is excellent. It really is rally fascinating through studying period. You are going to like the way the writer write this publication.
