We speak again of the cotton plant which is a sun plant, and loves a hot, not too wet, soil. So far from these chlorides doing harm by their presence, the general belief is that they are the main agents of good, owing to their property of holding moisture. A little of it in the row will cause the soil next to the plants to hold moisture in such a degree as to make it look greasy by contrast. So say the planters. Many attribute the whole good effect of Kainite to this property. Mr. W. G. Lewis says: My experience with Kainite during two dry years (1880-81) was very favorable; this year being very wet no manure showed any sign whatever. Dr. E. S. Broadwey, Lenoir...
