MEMOIRES

To read **Memoires** eBook, you should access the button listed below and save the file or have access to additional information that are in conjunction with MEMOIRES book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 144 pages. Original publisher: Champaign, IL: US Army Corps of Engineers, Construction Engineering Research Laboratories ; Springfield, VA: National Technical Information Service, distributor, 1998 OCLC Number: ocm42414429 Subject: Composite materials. Excerpt: . . . USACERL TR-98 123 15 The above-identified property benefits can provide important property advantages when comparing piling products made from polymer composites to traditional materials such as wood, concrete, and steel. Composite Materials for Piling Polymeric resin materials used to fabricate composite piling products involve two different resin types: thermoplastic and thermoset. Thermoplastics are comprised of long hydrocarbon polymer chains that are not chemically bonded to each other. Thermoplastic materials soften when heated and harden upon cooling, hence the joining of the terms thermo (heat) and plastic (formable). They can be remolded into a different shape through the use of heat and force. Assuming no thermal degradation or oxidation during multiple heating and cooling cycles, this process can be repeated indefinitely. Common examples of thermoplastics are polyethylene (PE), polypropylene (PP), polystyrene (PS), and polyvinyl chloride (PVC). Thermosetting resins are normally liquids, or in a few special cases, solids with low melting point temperatures (Composites Institute 1995b). These resins are chemically reacted to form bonds between the hydrocarbon chains which, in turn, changes the resin from a liquid to a solid. Generally, a thermosetting reaction process can not be reversed. Also, the application of heat cannot generally be used to reshape the item as in a thermoplastic. Polyesters, vinyl esters, and epoxies are common examples of commercial-grade thermosetting resin systems. While a variety of fiber types can be used for reinforcements in FRP composite materials, glass fibers would be the most common...
