Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Isle of Pines, Caribbean Sea: Its Situation, Physical Features, Inhabitants, Resources, and Industries The island has a geological relation to the general chain of insular mainlands of the Antilles, and is unlike the numerous low coral and sand formations known as keys and mangrove swamps scattered in such profusion off the coast. In general the surface is a plateau of 50 to 100 feet above sea level, broken by ridges of hills or cliffs that project abruptly above the general surface. The two mountain ridges at the northern end reach an elevation of about feet, and are composed of limestone and marble. The other ridges in the center are much lower, less precipitous, and formed of gray sandstone, red rock, and gravel, containing iron.
