It becomes an incredible publication that we actually have at any time read. It is one of the most incredible book i actually have go through. I am just delighted to tell you that this is actually the finest pdf i actually have read through within my personal life and might be he finest publication for actually.

AV Akademikerverlag. Paperback. Condition: New. 100 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. The discovery of laser cooling and magneto-optical trapping was awarded with the 1997 Noble Prize in physics. Since then quantum atom optics has become one of the most active research areas in experimental physics. In this thesis Oliver Gugenberger gives a vivid description of the operation principle of magneto-optical trapping and how it is possible to perform single atom experiments based on this method. He designed a special-magneto optical trap at the Vienna University of Technology which will be used in upcoming experiments to trap and entangle single Rubidium atoms as a possible realization of a quantum computer. The manuscript is divided into three parts: The first part summarizes the required theory, the middle part describes the scientific procedure and the last part explains the components which are needed to run such an experiment. All in all, the book gives a comprehensive introduction to quantum atom optics with a touch of mechanical. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
