The negative character of the members of this family de creases with the increasing atomic weights, while there is an increase of those physical properties which characterize the metals. Oxygen is a gas, while the other three are solids at ordinary temperatures. (Harris, 83., Stoddard, p. 19, Remsen, pp. 180--182., Cooley, g 112.) 7. SULPHUR, Sym., S. A.t. Wt., 32. Valence, 2, 4, 6. This element, when acting in its lowest degree of valence, shows much similarity to oxygen, being strongly negative, and forms with all the more positivt elements compounds analogous to the correspon ding compounds of O. The sulphur molecule varies in the number of atoms it contains with the temperature, being S- at 10000, S6 at 500-, and at lower temperatures some greater nnmber, probably variable and as yet undetermined. (Harris, 84.) 114 Occurrence. It is widely distributed in nature i-i both the frei and combined states. 1. It is found free in volcanic districts mixed with marl and gypsum ruck; principally in Sicily, Italj, and Spainand in considerable quantity in California. 2. It occurs in great abundance and widely distributed as sulphides of the metals and of Indrogen 3. It is found united with oxygen as SOz, and in the abundant rock known as gypsum, --CaSCU...
