Why have we humans always longed to connect with something larger than ourselves Even today in our technologically advanced age, more than seventy percent of Americans claim to believe in God. Why, in short, wont God go away In this groundbreaking new book, researchers Andrew Newberg and Eugene dAquila offer an explanation that is at once profoundly simple and scientifically precise: The religious impulse is rooted in the biology of the brain. In Why God Wont Go Away, Newberg and dAquila document their pioneering explorations in the field of neurotheology, an emerging discipline dedicated to understanding the complex relationship between spirituality and the brain. Blending cutting-edge science with illuminating insights into the nature of consciousness and spirituality, they bridge faith and reason, mysticism and empirical data. The neurological basis of how the brain identifies the real is nothing short of miraculous.
