

New Pulsed EPR Methods for Separating Overlapping EPR Signals and their Application to Mitochondrial Complex I

By Thorsten Maly

Cuvillier Verlag Dez 2004, 2004. Taschenbuch. Condition: Neu. Neuware - One of the main topics of this thesis is the investigation of ironsulphur clusters of complex I from *Y. lipolytica* by pulsed EPR. The structural environment of the clusters N1 and N2 is probed using pulsed EPR techniques (ESEEM, ENDOR, HYSCORE etc.). Unfortunately, it is not possible to investigate the biologically interesting ironsulphur cluster N2 of complex I alone, because the EPR spectrum of cluster N1 is almost completely overlapping with the spectrum of cluster N2. To overcome this problem, a new pulsed EPR method is developed as part of this thesis to separate the contributions of different paramagnetic species based on differences in their relaxation behaviour. For the first time the possibility is shown, that an inversion-recovery filter can be used in a pulsed EPR experiment to separate the spectral contributions from different paramagnetic species. This technique is first demonstrated using the two model compounds BDPA(PS) and Tempo(PS) in order to obtain the individual echo-detected field-swept spectra of these two components from a mixture. With this novel method applied to complex I from *Y. lipolytica*, it is possible for the first time to record individual EPR spectra of the...

Reviews

A very awesome ebook with perfect and lucid explanations. I could possibly comprehend every thing using this written e.pdf. I am happy to explain how this is basically the best ebook i have got read inside my personal life and may be he very best book for ever.

-- **Mr. Santa Rath**

The ideal publication i possibly go through. It is amongst the most awesome publication we have study. I am just easily will get a satisfaction of studying a published publication.
