The thoroughly dried gas was passed over the previously dried metallic oxides placed in the bend of a U-shaped Marchand tube immersed in an oil bath. The bulb of the mercury thermometer was held in position against the bend of the tube. The following table shows the temperature at which dry ammonia gas and dry methane began to take oxygen from the metallic oxides and reduce them to the metallic state: III.--Table of Reductions with Ammonia and with Methane. Oxide. Formula. Temperature with Temperature with W 13. Crl4. Mercurous oxide Hg, O 67C. 220C. Mercuric oxide HgO 157 200-210 Cuprous oxide Cu2O 208 230 Oxide. Formula. The oxides of lead and zinc, however, give up oxygen more easily...
