VDM Verlag. Paperback. Condition: New. 132 pages. Dimensions: 8.7in. x 5.9in. x 0.3in. Breast Cancer is the most common cancer in Western women and represents 28 of female cancer deaths. During the last decades, research has revealed cancer as a complex heterogeneous disease triggered by dynamic changes in the genome. The work in this dissertation summarizes the investigation of polymorphisms in the GH1IGF-1 axis in relation to breast cancer risk by means of the planning and conducting of case-control studies. Many findings were novel and they reflected the complexity of the gene regulation along the GH1IGF-1 pathway. In summary, the studied polymorphisms were mainly associated with a decreased breast cancer risk. This lead to the suggestion that genetic variants in the GH1 IGF-1 axis do not increase the mitogenic and antiproliferative features of the pathway, but rather protect the cells from proliferation. The study contributes to the world-wide effort of identification of low-penetrance genetic variants, which may be useful tools for prevention, prognosis and planning of individual therapy. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
