

## Mathematical Models in Population Biology and Epidemiology

Filesize: 5.07 MB

### **Reviews**

*This publication is definitely not effortless to get going on reading through but really exciting to read through. it was actually writtern really properly and beneficial. I am just very easily could get a delight of reading through a created publication.*  
(Gino Jerde Jr.)

## MATHEMATICAL MODELS IN POPULATION BIOLOGY AND EPIDEMIOLOGY

To get **Mathematical Models in Population Biology and Epidemiology** PDF, you should follow the button below and download the file or get access to other information which are highly relevant to MATHEMATICAL MODELS IN POPULATION BIOLOGY AND EPIDEMIOLOGY book.

Springer-Verlag GmbH Dez 2011, 2011. Buch. Book Condition: Neu. 245x155x35 mm. Neuware - This book is an introduction to the principles and practice of mathematical modeling in the biological sciences, concentrating on applications in population biology, epidemiology, and resource management. The core of the book covers models in these areas and the mathematics useful in analyzing them, including case studies representing real-life situations. The emphasis throughout is on describing the mathematical results and showing students how to apply them to biological problems while highlighting some modeling strategies. A large number and variety of examples, exercises, and projects are included. Additional ideas and information may be found on a web site associated with the book. Senior undergraduates and graduate students as well as scientists in the biological and mathematical sciences will find this book useful. Carlos Castillo-Chavez is professor of biomathematics in the departments of biometrics, statistics, and theoretical and applied mechanics at Cornell University and a member of the graduate fields of applied mathematics, ecology and evolutionary biology, and epidemiology. He is the recipient of numerous awards including two White House Awards (1992 and 1997) and QEM Giant in Space Mentoring Award (2000). Fred Brauer is a Professor Emeritus of Mathematics at the University of Wisconsin, where he taught from 1960 to 1999, and has also been an Honorary Professor of Mathematics at the University of British Columbia since 1997. As the world population exceeds the six billion mark, questions of population explosion, of how many people the earth can support and under which conditions, become pressing. Some of the questions and challenges raised can be addressed through the use of mathematical models, but not all. The goal of this book is to search for a balance between simple and analyzable models and unsolvable models which are capable of addressing...
