Createspace Independent Publishing Platform, United States, 2012. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.The need and demand for fish and seafood are rising continually worldwide, and wild fish stocks are steadily becoming scarcer and scarcer. Aquaculture is a young and innovative part of the economy with high growth rates and secured prospects. The future of fish production requires that water be used as economically as possible, and that waste products be removed safely with the lowest possible energy consumption. Environmental legislation is progressively reducing the possibilities of open water fish production and existing fish farms are confronted with directives for purifying their waste discharges. This has accelerated the development of intensive, water-saving systems for fish production, which do not depend upon natural environmental factors. Through improvements to these techniques, very efficient and cost effective systems for both fresh- and seawater where developed. Because of extensive work and many years experience in fish farming, it s know how important it is to have secure, stable, safe and effective units and equipment. This knowledge is apparent in these systems, machines, instruments and accessories. Offered is a complete program for aquaculture from the supply of single components like: incubation-, holding-, feeding-, aerating-, and processing-systems, to complete hatcheries and grow-out systems suitable for many species. If preferred, even complete, all-inclusive services - from consulting and planning to training and marketing, etc. Use this extensive experience and know-how to secure your success!.
