SELFORGANISED CRITICALITY AND PREDICTABILITY IN ATMOSPHERIC FLOWS

Springer-Verlag Gmbh Mai 2017, 2017. Buch. Condition: Neu. Neuware - This book presents a new concept of General Systems Theory and its application to atmospheric physics. It reveals that energy input into the atmospheric eddy continuum, whether natural or manmade, results in enhancement of fluctuations of all scales, manifested immediately in the intensification of high-frequency fluctuations such as the Quasi-Biennial Oscillation and the El-Nino-Southern Oscillation cycles. Atmospheric flows exhibit self-organised criticality, i.e. long-range correlations in space and time manifested as...
