I.K. International Publishing House Pvt. Ltd., 2015. Hardcover. Book Condition: New. 16cm x 24cm. This seminal project will fundamentally change the way that we think about number theory (in relation to simpleness and complicatedness in arithmetic) from the combined perspectives of the mind, nature, society, and culture, with enormous implications for the human future and what I originally called its post-human fate. Author This is a milestone book on number theory, in which the author exposes the reader to the importance of number theory, the historical debates and controversies surrounding it, its diverse aspects and so on; then selectively picks up the dialectic relationship between simpleness and complicatedness; and goes on to synthesize an entirely new body of knowledge which is unheard of today The Transmutative Theory of Numbers (TTN). Indeed this work can be called as beyond simpleness and complicatedness which according to the author beholds the future of number theory. This brand new TTN comprises forty-four major theses, encompassing the broad relations to method, structure, process, agency and outcome. The author has dissected the dialectic contexts of simpleness and complicatedness from the perspectives of the mind, nature, society and culture, which pave the way for further enquiry and the need to transcend them, finally leading to the eventual postulation of the TTN theses. With the approach, focus and the subject matter per se, this book will attract the inquisitive minds of those who have interest in areas as diverse as history, logic, pure mathematics, applied mathematics, mathematical logic, algebra, geometry, analysis, computer science, analytic number theory, physics, engineering, natural science, philosophy of mathematics, mathematical cognition, algebraic number theory, probabilistic number theory, arithmetic combinatorics, ethnomathematics, and so on.
