Not illustrated. 1913 Excerpt: .eye alone can produce a straight stick from what otherwise is a tangled, worthless, twisted shrub. Umbrella handles utilize waste from cane stock and thus the two industries are frequently combined. Several woods, however, such as mahogany and ebony, are used for umbrella handles and not for walking sticks. Beech contributes over 90 per cent of the wood reported in Table 36, and it goes almost exclusively into whip stock. Beech is elastic, easily worked, does not check or warp badly, is moderately strong and makes splendid whip stocks and umbrella sticks. Its abundance and cheapness (\$23.16 f. o. b. factory) commend it above other superior but more expensive woods like sugar maple and birch. New York State forests alone contribute this important species to these industries. Bamboo is contributed by China and Japan, partridge wood comes from South America, Malacca from Southern Asia, Whanges from Japan, rattan and others from the Singapore area of China. The ebonies make choice handles and are cut from solid deals or blocks. Furze, a common British plant, also known as whin or gorse, is very irregular in growth, but when properly dressed and straightened it makes extremely pretty walking and umbrella sticks and is in great demand. The low average price of \$28.33 for this industry does not take into consideration the cost of many foreign woods that are bought by the ton or in the piece, per hundred, or per gross. A fair average annual price paid for...
