

Sustainable legumes-cereal cropping system : Sustainable legumes-cereal cropping system through management of biological nitrogen fixation

Filesize: 1.24 MB

Reviews

If you need to adding benefit, a must buy book. It really is writter in straightforward words and phrases and not confusing. You will not feel monotony at anytime of your respective time (that's what catalogues are for concerning if you ask me).

(Dr. Celestino Treutel)

SUSTAINABLE LEGUMES-CEREAL CROPPING SYSTEM : SUSTAINABLE LEGUMES-CEREAL CROPPING SYSTEM THROUGH MANAGEMENT OF BIOLOGICAL NITROGEN FIXATION

[DOWNLOAD](#)

VDM Verlag Sep 2009, 2009. Taschenbuch. Condition: Neu. This item is printed on demand - Print on Demand Neuware - Biological nitrogen fixation (BNF) is the most important biochemical reaction for life on earth. BNF occurs mainly through symbiotic association of legumes with certain N₂-fixing microorganisms that convert elemental nitrogen into ammonia. Phosphorus has a significant positive effect on the growth and biological yield of the legumes. Supply of available N following legumes is usually higher than those following non-legumes. The ability of legumes to fix atmospheric nitrogen, their nodulated roots and plant residues left after harvesting represent a valuable source of organic N. Annual crop legumes, grown in rotation with cereal crops, can improve yields of the cereals and contribute to the total N pool in soil. Legume-cereal sequence also enhanced biomass and grain yield as well as WUE of subsequent wheat. However, it is recommended that further long term trials involving legumes-cereal rotation may be conducted on farmer's field to get comprehensive data, improving the understanding and to come up to a more sound conclusion. 176 pp. Englisch.
