

Cellular Automata Based on Block Cipher and Road Traffic Model

Filesize: 6.99 MB

Reviews

It in a of the most popular publication. It really is filled with knowledge and wisdom Its been designed in an exceedingly straightforward way and it is merely soon after i finished reading this pdf by which actually transformed me, affect the way in my opinion.
(Gerardo Rath)

CELLULAR AUTOMATA BASED ON BLOCK CIPHER AND ROAD TRAFFIC MODEL

DOWNLOAD PDF

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Cellular Automata Based Efficient Parallel Block Cipher Encryption Algorithm and Road Traffic Model | This work provides a survey of available literature of some methodologies employed by researchers to utilize the Cellular Automata (CA) for modelling purpose. The literature survey introduces the different types of CA being used for modelling and also tries to present the different fields in which CA has been applied. Programmable Cellular Automata (PCA) was successfully applied for simulation of biological and physical systems and recently to design parallel and distributed algorithms for solving task density and synchronization problems. In this work PCA is applied to develop cryptography algorithms. We proposed a modified version of road traffic model based on parallel processing concept for single lane traffic simulation and CA is applied to solve the bridge traffic control problem. A Cellular Automata model is proposed in this work to analyze a Vehicular Intersection Traffic Problem. We proposed an appropriate routing protocol for VANET based on the dynamic network connectivity behaviour of urban traffic at road intersection. The network connectivity model for VANET based on parallel processing concept are essential for designing an efficient routing protocol for VANET. | Format: Paperback | Language/Sprache: english | 56 pp.
