

Vibration Analysis of Composite Aircraft Wing

By Mohammad Reza Khosravani

LAP Lambert Academic Publishing Mrz 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - Material behavior and properties are fundamentally important for mechanical simulation, analysis and development. The present book deal with vibration in composite aircraft wing which are using in Unmanned Aerial Vehicle (UAV). A multiple series of instrumented vibration analysis experiments, in two different conditions were performed on composite modeled aircraft wing. The simulation and analysis include natural frequencies, changes in measured mode shapes and changes in measured flexibility coefficients. Obtained results from experiments and analysis appear to provide prediction of strength and explanation of some defects and damage on composite aircraft wing. This book describes improvement of impact resistance of the modeled wing and also obtained technical results prepared data for future computational models. The critical issues for future research in the area of mechanical vibration and behavior of composite materials are also discussed. 76 pp. Englisch.

Reviews

These types of publication is the greatest publication available. It really is filled with knowledge and wisdom Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- Prof. Lenna Beatty III

It in a of my personal favorite book. It is writter in easy terms and never hard to understand. Its been designed in an exceedingly easy way and it is only after i finished reading this publication by which in fact changed me, change the way i think.

-- Lucinda Stiedemann
