Dover Publications Inc., United States, 1989. Paperback. Condition: New. New edition. Language: English . Brand New Book. In this concise volume, one of the founder of quantum mechanics and one of the greatest theoretical physicists of the century (Nobel laureate, 1933) attempts to develop a simple, unified standard method of dealing with all cases of statistical thermodynamics (classical, quantum, Bose-Einstein, Fermi-Dirac, etc.) The level of discussion is relatively advanced. As Professor Schrodinger remarks in the Introduction: It is not a first introduction for newcomers to the subject, but rather a repetitorium. The treatment of those topics which are to be found in every one of a hundred text-books is severely condensed; on the other hand, vital points which are usually passed over in all but the large monographs (such as Fowler s and Tolman s) are dealt with at greater level.
