POSITIVE POLYNOMIALS, CONVEX INTEGRAL POLYTOPES, AND A RANDOM WALK PROBLEM

Springer. Paperback. Condition: New. 138 pages. Dimensions: 9.2in. x 6.1in. x 0.4in. Emanating from the theory of C-algebras and actions of tori theorem, the problems discussed here are outgrowths of random walk problems on lattices. An AGL (d, Z)-invariant (which is a partially ordered commutative algebra) is obtained for lattice polytopes (compact convex polytopes in Euclidean space whose vertices lie in \mathbb{Z}^d), and certain algebraic properties of the algebra are related to geometric properties of the polytope. There are also strong...
