## APPLICATIONS OF COMPUTATIONAL INTELLIGENCE IN BIOLOGY : CURRENT TRENDS AND OPEN PROBLEMS

Berlin Springer Okt 2010, 2010. Taschenbuch. Condition: Neu. Neuware - Computational Intelligence (CI) has been a tremendously active area of research for the past decade or so. There are many successful applications of CI in many sub fields of biology, including bioinformatics, computational genomics, protein structure prediction, or neuronal systems modeling and analysis. However, there still are many open problems in biology that are in desperate need of advanced and efficient computational methodologies to deal with tremendous amounts of data that those problems are plagued by. - fortunately, biology researchers are very often unaware of the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries. On the other hand, computational intelligence practitioners are often unfamiliar with the particular problems that their new, state-of-the-art algorithms could be successfully applied for. The separation between the two worlds is partially caused by the use of different languages in these two spheres of science, but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand, and the needs of the biology realm on the other. The purpose of this book is to provide a medium for such an exchange of expertise and concerns. In order to achieve the goal, we have solicited contributions from both computational intelligence as well as biology researchers. 428 pp. Englisch.
