MODERN COMPILER IMPLEMENTATION IN JAVA

Cambridge University Pr. Okt 2002, 2002. Buch. Book Condition: Neu. 261x212x35 mm. Neuware - This textbook describes all phases of a compiler: lexical analysis, parsing, abstract syntax, semantic actions, intermediate representations, instruction selection via tree matching, dataflow analysis, graph-coloring register allocation, and runtime systems. It includes good coverage of current techniques in code generation and register allocation, as well as the compilation of functional and object-oriented languages, that is missing from most books. The most accepted and successful techniques are...
