# NUMERICAL MODELS FOR DIFFERENTIAL PROBLEMS

Springer Verlag. Hardcover. Condition: New. 658 pages. Dimensions: 9.3in. x 6.3in. x 1.3in. In this text, we introduce the basic concepts for the numerical modelling of partial differential equations. We consider the classical elliptic, parabolic and hyperbolic linear equations, but also the diffusion, transport, and Navier-Stokes equations, as well as equations representing conservation laws, saddle-point problems and optimal control problems. Furthermore, we provide numerous physical examples which underline such equations. We then analyze numerical solution methods based on finite elements, finite...
