

## Proceedings of the Institute of Radio Engineers Volume 5

Filesize: 3.37 MB

### ***Reviews***

*The book is fantastic and great. I have got read through and i am confident that i will planning to read yet again once again in the foreseeable future. I found out this book from my dad and i recommended this publication to discover.*  
**(Prof. Nicole Zieme)**

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: .of the maxima and minima is given by The entire family of curves which show the values of the potential difference corresponding to different values of  $i_0$  have a series of common points defined by the relations The current, which is  $i_0$  at the beginning of the charge, is represented by a periodically damped curve, oscillating from one side to the other of the time axis, as shown in curves 1, 2, and 3 of Figure 7. The zeros correspond to the maxima and minima of the difference of potential:  $wt = kn - n$  (14) These maxima and minima occur at times given by the formula  $-(2M-l)P-\$$ . (15) Efficiency of the Charging Circuit. Let us suppose that the spark passes at the time when the potential difference at the condenser terminals is  $v$ . The energy available for the circuit at the condenser terminals is  $CV$ . The energy expended in the  $m_i r$  charging circuit is  $I \text{Eid}t$ . The efficiency is the ratio of these two quantities: (16) In the case of aperiodic charging, the potential difference at the condenser terminals is always less than the electromotive force and the efficiency less than 0.5. Because of this low value of the efficiency, such a condition should be avoided in practice. In the case of periodic charging, the potential difference is a damped period function, oscillating above and below the electromotive force  $E$ . Its maxima are given by  $wt=(2k + l)x-i$ ., (17) which maxima become smaller as  $k$  increases. (See...
