

Scalars Fields in the Nonsymmetric Kaluza-Klein (Jordan-Thiry) Theory

By Kalinowski, Marek

Condition: New. Publisher/Verlag: Scholar's Press | In this book we construct the Nonsymmetric Jordan-Thiry Theory unifying N.G.T., the Yang-Mills's field, the Higgs's fields and scalar forces in a geometric manner. In this way we get masses from higher dimensions. We discuss spontaneous symmetry breaking, the Higgs's mechanism and a mass generation in the theory. The scalar field (as in the classical Jordan-Thiry Theory) is connected to the effective gravitational constant. This field is massive and has Yukawa-type behaviour. We discuss the relation between R^+ invariance and $U(1)F$ from G.U.T. within Einstein -transformation, and fermion number conservation. In this way we connect W_{mi} -field from N.G.T. with a gauge field AF from G.U.T. We derive the equation of motion for a test particle from conservation laws in the hydrodynamic limit. We consider a truncation procedure for a tower of massive k (or k) scalar fields using Friedrichs's theory and an approximation procedure for the lagrangian involving Higgs's field. The geodetic equations on the Jordan-Thiry manifold are considered with an emphasis to terms involving Higgs's field. | Format: Paperback | Language/Sprache: english | 420 pp.

Reviews

This ebook is fantastic. It is probably the most awesome book i actually have read. I found out this ebook from my i and dad suggested this book to understand.

-- **Ethel Mills**

Very helpful to any or all category of men and women. It is definitely simplified but unexpected situations within the 50 % of your publication. I am very easily could possibly get a pleasure of reading a composed ebook.
