Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from **University of Iowa Studies in Child Welfare, Vol. 2: In Capacity and Grip Strength, of Preschool Children** Dr. Metheny s study of breathing capacity and grip strength constitutes a real advance in this field. In the first place, there are presented new designs for the spirometer and the dynamometer, designs which permit high reliability in the measurement of preschool children. These new instruments are the work of Mr. J. G. Sentinella. Over 6,000 tests of each function are utilized and their relation to other anthropometric measures is analyzed. In both breathing capacity and grip strength boys tend to be slightly superior to girls. For this sampling of children, which is a selected one in terms of social status and mental ability, there is no relationship between the functions measured and intelligence. There has long been an interest in the possible relation of breathing capacity and grip strength to health and physical condition. While a general prediction of health is not indicated from Dr. Metheny s data, there is some evidence of a decrease in strength and breathing capacity prior to the onset of a cold. In view of its important practical implications, this question warrants further investigation. It may be said that Dr. Metheny s whole study, involving as it does improved instruments, new anthropometric measurements and refined methods of statistical analysis, should serve well as a starting point for further substantial research. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work.
