The observations given in the table extend over more than twenty years, in many cases, and include from 10,000 to 20,000 returns the exception of MW 84, 85, and 105 to 112, which were made on isochromatic plates, but without any screen. In general, the variables were compared by Argelander s method with a brighter and a fainter star of the sequence given on page 107. The estimates were made in grades which were later reduced to magnitudes, as described on page 12. To save space only the resulting magnitudes are given in Table XXIII. The first two and a half pages of the table contain data in regard to the plates, followed by the results derived for three of the variables. The first column contains the letter used to designate the series and the number of the plate. The second column gives the year, month, and day, on which the plate was made, and the third column, the corresponding Julian day and decimal of the middle of the exposure. These dates have been corrected for the equation of light. The fourth column gives the duration of the exposure in minutes, and the fifth column, the quality of the plate on a scale of 5, in which 1 indicates that it is practically worthless, 2 very poor, 3 fair, 4 good, and 5 excellent. The given quality is the mean of two estimates, one by Miss Leland, and one by...
