Reviews

*A superior quality ebook and also the font used was interesting to read through. This is for all who statte there was not a well worth reading. I discovered this publication from my dad and i encouraged this pdf to learn.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Dynamic Light Scattering, Atomic Force Microscopy, Static Light Scattering, X Rays Diffraction | Nanoparticles (NPs) are a class of modern and versatile materials that have an extremely wide range of possible applications. This book presents first a simple technique for NP synthesis, by chemical coprecipitation. Simple procedures for measuring the rheological properties of a nanofluid and several techniques for NP size characterization, as DLS, XRD and AFM, are presented, as well. When diluted in aqueous solution, a large variety of NPs aggregate fast. A section of this book deals with NP aggregation dynamics and with several simple techniques, as DLS and SLS that can be used for NP aggregation monitoring. The concepts are presented in a simple and straight manner, with simple experimental setups, therefore this book should be considered as entry level for somebody interested in NP synthesis and characterization, as undergraduate and graduate students. | Format: Paperback | Language/Sprache: english | 134 gr | 220x150x5 mm | 88 pp.
