This item is printed on demand - Print on Demand Neuware - VLSI design suffers from high design complexity and a large number of optimization objectives requiring hierarchical design approaches and multi-objective optimization techniques. The floorplanning stage of the design cycle becomes highly important in hierarchical design methods. The classical floor planning techniques use block packing to minimize chip area, by making use of algorithms like B-TREE representation, simulated annealing. To get an optimal solution it is imperative to choose an efficient algorithm. In this work, a genetic algorithm based floorplanner has been developed. 72 pp. Englisch.
