Air Quality in the National Parks: A Summary of Findings from the National Park Service Air Quality Research and Monitoring Program (Classic Reprint) (Paperback)

By Christine Shaver

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Air Quality in the National Parks: A Summary of Findings From the National Park Service Air Quality Research and Monitoring Program The purpose of this report is to summarize findings from the nps air quality research and monitoring program based on data collected through 1987. This information helps the National Park Service to remedy and prevent resource degradation so that future generations can enjoy the parks in as natural a condition as possible. Visibility monitoring has shown that. In addition to natural sources of visibility impairment. There are varying degrees of visibility impairment from manmade pollution in virtually all monitored parks. Nps research findings suggest that fine sulfate particles are the single most important contributor to visibility impairment in most nps units. Fine sulfate particles, which can be transported long distances in the atmosphere. Are primarily the result of sulfur oxide emissions from energy and industrial sources. In the Colorado Plateau area. Where Grand Canyon National Park and several other nps units are located, fine sulfate particles are responsible for 40 to 60 percent of the visibility impairment. In eastern areas...
