Reviews

A top quality publication and also the font employed was interesting to learn. It is really simplistic but excitement within the fifty percent from the book. Its been designed in an remarkably basic way in fact it is only following i finished reading this pdf where in fact changed me, modify the way i believe.

THE UNIVERSE IN THE REARVIEW MIRROR: HOW HIDDEN SYMMETRIES SHAPE REALITY

Dutton. 1 Cloth(s), 2013. hard. Book Condition: New. Speeding across space and time, physicist Dave Goldberg shows here that every part of our elegant universe, from the Higgs boson particle to the most massive group of galaxies, is shaped by hidden symmetries. Why is the sky dark at night? Is it possible to build a shrink-ray gun? If there is antimatter, can there be anti-people? Are time and space like a butterfly's wings? And why are past, present, and future our only options? Goldberg examines such wide-eyed questions and finds surprisingly profound implications of symmetry much of it predicted by overlooked mathematician Emmy Noether, whose theorem relating conservation laws to symmetries is now regarded to be as important as Einstein's notion of the speed of light. "Mathematical symmetries lie at the heart of the answers, but Goldberg offers math-free guideposts along the way in this witty and accessible read. Tip: Don't skip the copious footnotes, packed with geek humor." Discover "Goldberg has a fine ear for the absurd, and is deft at revealing why things we take for granted, such as the equality of gravitational and inertial mass, are strange and not obvious at all." New Scientist 330.
