Proficiency in this most useful art is not to be acquired from books alone, but I believe the information given in the following pages may be taken as sound and practical, whilst the lathes, tools, and appliances described are those of the present day. The first part is devoted mainly to the description of the principal varieties of lathe in use. The second part treats of turning with hand tools in hard and soft woods, ivory, c., also, in iron and the metals generally; this part includes screw chasing, drilling, fret sawing, and other subsidiary operations. The third part describes the self-acting lathe and its uses, including screw cutting, boring, turning irregular shapes, wheel cutting, milling, slot drilling, planing, c. The fourth part is on ornamental turning, with a description of the ornamental lathe, the ellipse, the eccentric, the geometric, the compound geometric and other chucks; the eccentric, ellipse, rose and other ornamenting instruments, the spherical slide rest, c., c.
