Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Practical Medicine Series, Vol. 9: Comprising Ten Volumes on the Year s Progress in Medicine and Surgery Pirquet s Cutaneous Tuberculin Reaction has been much discussed. The procedure consists in scarifying as for vaccination. This scarified area is treated by Pirquet with a 4 per cent, solution of old tuberculin. Others use from 1 to 4 per cent, solutions. If the patient be tuberculous, then according to Pirquet, there appears within 48 hours a papule surrounded by a hyperemic zone 1 inch to 1 1/2 inches in diameter. The disappearance of this papule is often followed by a brownish pigmentation of the skin which may persist for some time. The reaction has various degrees of severity, from a very small papule to a large and intensely inflamed area. However, the severity of the reaction is not a measure of the extent of the tuberculous process. The reaction is not attended by general symptoms such as fever and malaise. F. L. Christian makes his tests by scarifying 3 small areas about 2 inches apart and applying the ointment to 2 of these areas, using the third, the center one, as a control. The reaction begins in from 4 to 8 hours. In most instances the reaction was still quite evident at from 2 to 4 days after the inunction. No inconvenience was experienced, no rise of temperature or malaise; the usual manifestation was a red areola about the scarifications, some slight swelling, itching and in some the formation of small nodules, all of which disappeared in a week or less. In 7 cases out of 18 reported by Christian there was no reaction, although tubercle bacilli...
