

Engineering Mathematics a Series of Lectures Delivered at Union College

Filesize: 6.72 MB

Reviews

Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. Its been written in a remarkably easy way in fact it is only right after i finished reading this book in which basically changed me, modify the way i really believe.

(Prof. Vanessa Smitham V)

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: .problem whether a maximum of a minimum occurs, or neither. For instance, if the problem is to determine the speed at which the efficiency of a motor is a maximum, the solution: speed=0, obviously is not a maximum but a minimum, as at zero speed the efficiency is zero. If the problem is, to find the current at which the output of an alternator is a maximum, the solution $i = 0$ obviously is a minimum, and of the other two solutions, i_1 and i_2 , the larger value, i_1 , again gives a minimum, zero output at short-circuit current, while the intermediate value i_2 gives the maximum. 101. The extremes of a function, therefore, are determined by equating its differential quotient to zero, as is illustrated by the following examples: Example 4. In an impulse turbine, the speed of the jet (steam jet or water jet) is S_1 . At what peripheral speed S_2 is the output a maximum. The impulse force is proportional to the relative speed of the jet and the rotating impulse wheel; that is, to $(S_1 - S_2)$. The power is impulse force times speed S_2 ; hence, $P = k(S_1 - S_2)S_2$, (3) and is an extreme for the value of S_2 , given by $-r - r = 0$; hence, do $2 S_1 - 2S_2 = 0$ and $S_2 = \frac{S_1}{2}$; (4) that is, when the peripheral speed of the impulse wheel equals half the jet velocity. Example 5. In a transformer of constant impressed e.m.f. $E_0 = 2300$ volts; the constant loss, that is,...
