Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The University Maine Studies: The Habits, Anatomy, and Embryology of the Giant Scallop, (Pecten Tenuicostatus, Mighels) Most of the material upon which these observations were made was secured near Bass Harbor, Mount Desert Island, Maine, during the summer of 1901. Scallops in that region are fairly abundant but are now for the most part confined to water 40 fathoms or more in depth and are accordingly only to be obtained by dredging. The scallop industry of Maine has undergone some changes since the appearance of Smith s (28) paper in 1889, but on the whole the changes are not very important. Some of the beds have run out so they are not profitable to work, and others have been discovered. Most of the good beds are now in water of from 40 to 60 fathoms and the scallops are somewhat smaller than in former years but the methods of catching them do not seem to have changed much. The majority of lamellibranchs are adapted for burrowing more or less in mud or sand, are elongated,...
