SPECTRAL MODELLING OF RADIATIVE HEAT TRANSFER IN INDUSTRIAL FURNACES

Shaker Verlag Feb 2004, 2004. Taschenbuch. Condition: Neu. Neuware - The radiative properties of the combustion gases are considered as grey in most radiative heat transfer calculations of industrial furnaces, which may lead to inaccurate predictions of the temperature distribution and the wall heat fluxes. Most non-grey models from literature are computationally far too expensive for three-dimensional combustion simulations. An efficient approach for the spectral modelling of radiation in combustion systems has been evaluated in the present work. Several approaches...

Reviews

The best publication i actually study. I actually have study and so i am confident that i am going to likely to study once more yet again later on. You will not sense monotony at at any moment of your respective time (that's what catalogs are for relating to if you ask me).
